(54) Title: **MOBILE EQUIPMENT WITH TIME CONTROL FOR DRM SCHEMES**

(57) Abstract: The present invention provides a mobile equipment (1) for non stationary use, comprising a real time clock (RTC) (7) integrated in the mobile equipment (1) for generating a real time information, a system time generator (9) integrated in the mobile equipment (1) for generating a system time information by adding an offset to the real time information given by the RTC (7), a non-volatile memory (8) for the permanent storage of data and an input means (4) for inputting instructions for changing the system time information. Hereby, means for limiting the possible changes of the system time information generated by the system time generator (9) to a preset time range and means for limiting the possible reset value of the RTC (7) according to the data stored in the non-volatile memory (8) are provided.
